

MANUAL TO ATTEND THE FILTRATION SYSTEM AUTOMATIC DEVICE

The small automatic device serves manually or automatically to control the filtration pump run.

The whole device is turned on by means of the main circuit breaker (current protector) so that we switch the protector into position I, while its opening results after pressing down the lever to position 0. Because of safety reasons one has to retest on a monthly basis the proper operation of the current protector by pressing down the push-button TEST T. The main circuit breaker must open immediately after the push-button has been pressed down. If it has not been opened, the whole device must be switched off by means of the lever to position 0 and the faulty protector must be replaced by a professionally skilled person.

FILTRATION CONTROL

The filtration system motor run is controlled on the switchboard face. The filtration continues to run if in the upper position I (for the purpose of application of a vacuum cleaner, washing sand in the filtration system or an immediate need to filter) up to changing over to position 0 in which the filtration system motor is controlled by the switching clock depending on the time adjusted by you. Adjustment of the switching clock closing operation is carried out by pushing out the segments to position 1 = the filtration system motor runs; segments in position 0 = the filtration system motor does not run. Adjustment is possible after thirty (30) minutes (one segment = 30 minutes).

The filtration system motor is protected by means of the motor circuit breaker marked the „FILTRATION C.B.“.

The electrical device titled „SMALL AUTOMATIC DEVICE“ includes the closing and protecting features required for a safe and simple operation of your swimming pool. Since it involves an environment especially dangerous from the viewpoint of safety and protection from accident caused by electrical current, its repairs and assembly may be carried out only by persons with the required skills.

Any interference with the device by any person without the required skills is forbidden.
